

# END-TO-END TECHNOLOGY SERVICES

The proliferation of mobile devices, applications and cloud-based services has resulted in sprawling IT environments that are complex and difficult to manage. At the same time, the shortage of technical skill sets has left many organizations without the resources they need to optimize their operations.

Rahi Systems offers a comprehensive suite of technology services that address every aspect of the IT environment. Our core expertise in data center infrastructure enables us to establish a solid foundation for IT services with the flexibility to support continued growth.

We also have extensive experience in all aspects of enterprise storage and networking, as well as strong project management capabilities. We have built a deep bench of engineers with the experience and certifications to design robust multivendor solutions, and implement these solutions with minimum business disruption.

Through our physical presence on five continents and expert logistics capabilities, we are able to deliver solutions and services to locations around the world. Rahi helps accelerate the time-to-value of IT initiatives while enhancing the manageability and efficiency of the IT environment.

## Data Center Infrastructure Services

Rahi helps organizations create a finely tuned data center environment that optimizes costs, reduces risk and streamlines operations. We support every aspect of the data center infrastructure, from racks, cabinets and aisle-containment to electrical components and backup power.

### The Rahi Difference

- **End-to- End Services across the IT Environment**
- **Strong Project Management Skills**
- **Repeatable, Field-Proven Methodologies**
- **Extensive Knowledge of Best-of-Breed Solutions**
- **Global Distribution and Logistics**

### Design and Installation Services

- Data Center Rack and Cabinet Layout
- Mechanical and Thermal Engineering
- Aisle Containment Solutions
- Structural Implementation
- Cabling and Connectivity
- Power Line Installation
- Electrical Safety Analyses
- UPS Specification, Installation and Startup

### Storage Services

Rahi employs engineers with expertise in the design and implementation of enterprise-class storage solutions. We architect storage platforms that can easily be scaled to support data storage growth, with optimization techniques to gain the most value from available capacity. We can also help streamline the provisioning of storage, backup and archival, and provide disaster recovery and business continuity solutions to protect your operations.

Our implementation team can get your new storage environment into production quickly while minimizing the impact to your business operations. We can also assist with data migrations, and ensure that storage and data protection environments are optimized for the applications they support.

### Network and Cabling Services

Rahi's network services extend from the physical plant to the network edge, providing organizations with a high-performance infrastructure to meet ever-increasing demands. The Rahi team helps ensure that the network is scalable and cost-optimized, with end-to-end management for both wired and wireless infrastructure.

Our team can architect agile network solutions that relieve operational bottlenecks and support mission-critical applications. We help ensure that the network meets the demanding requirements of today's enterprise, with advanced data center fabrics and next-generation WAN solutions. We document every network design to streamline troubleshooting and diagnostics.

Rahi also offers a suite of cabling services to support data, voice, security and multimedia networks. Our certified engineers and technicians take the time to understand each customer's unique needs and budget, and build future-ready solutions that can accommodate changing business requirements.

### Global Reach

Rahi is the right choice for organizations with a global footprint. Our network of import clearing facilities work through the red tape so customers enjoy shorter lead times and optimal pricing at every location. We also provide asset management services that reduce the cost of maintaining hardware inventory while ensuring that technology solutions are available to meet mission-critical requirements.

Our engineering and technical personnel can be deployed quickly to complete projects worldwide, bringing knowledge of local requirements and resources. We also offer logistics services that include product assembly, packaging, tracking and security. Together, these capabilities enable us to deliver multivendor IT solutions across geopolitical boundaries, helping customers operate efficiently and successfully in every market they serve.
