OpenText Corporation is a Canadian company that develops and sells enterprise information management software. OpenText along with Rahi Systems aims its products at addressing information management requirements, including management of large volumes of content, compliance with regulatory requirements, and mobile and online experience management.

Rahi Systems caters these connectivity solutions that enable businesses to grow faster, lower operational costs, and reduce information governance and security risks by improving business insight, impact, and process speed.

**Portfolio Products to Consider**

OpenText Connectivity solutions provide secure and convenient access to a variety of enterprise hosts, connect people, data, and applications in mission-critical environments through a complete line of remote application access and data integration solutions. In addition, OpenText Exceed™ solutions can be used as part of a virtual desktop / thin-client rollout to provide fast, secure remote access to Windows and XWindow hosts.
OpenText Exceed™ is a secure, high-performance X Window server designed for environments where users need to securely and reliably access X Window applications over the LAN. Exceed is used by large enterprises in industries such as financial services, retail, and manufacturing as well as technology companies running high-end EDA and CAD applications. Combined with the Exceed 3D add-on, it is the premier solution for graphically intensive 3D CAD/CAM, engineering and seismic analysis applications over the LAN.

**Features**

- Certified compatible with Windows 7, 8 and 10 by Microsoft

- Supports smart card authentication for secure environments

- Includes HostExplorer for Windows IBM 3270, 5250, and VT emulation
Opentext™ | Exceed™ TurboX

Web-based remote access software for UNIX, Linux and Windows desktops and applications

Exceed TurboX enables the virtualization of graphically demanding software solutions where responsiveness and session resilience are key. At the same time, Exceed TurboX can be used for the virtualization of standard business desktops, giving organizations one tool for successful virtualization projects.

Features

- High-performance remote graphics
- Suspend and resume
- Software crash protection
- Ultra-low bandwidth usage
- Supercharged sharing
- Centralized administration and user management

Why Customers choose Exceed TurboX (EXT)
